

[Course Code] 2 Credits	<i>Prompt Engineering</i>	0:0:2
-----------------------------------	----------------------------------	--------------

Course Objective

- 1. To transition students from AI tool users to AI-powered business thinkers, applying advanced prompt engineering to real business problems.
- 2. To apply AI for structured business data analysis, financial understanding and strategic frameworks such as SWOT and Porter's Five Forces.
- 3. To leverage AI for marketing strategy, visual branding, social media and video content, and consumer sentiment analysis.
- 4. To use AI for startup ideation, investor pitch decks, workflow automation and no-code chatbot building — thinking like an AI-first business builder.
- 5. To apply AI knowledge and tools in designing, building and presenting a complete AI-powered business venture, backed by data, visuals and a pitch deck.

Course Syllabus — 24 Sessions

Module	Practical Exercise #	Exercise Details
Module-1: <i>AI Foundations & Business Research</i>	1	Compare ChatGPT, Claude and Gemini on the same business problem (‘Why is a local cafe losing customers?’); document which tool performed best and why.
	2	Write a 3-step chain prompt — research a business problem, suggest solutions, format as an executive summary; use role-based prompting (‘Act as a McKinsey consultant’) and compare structured vs unstructured outputs.
	3	Use Perplexity AI to research ‘Top 3 challenges for Indian SMEs’ ; cross-verify using Google Scholar and ChatGPT; identify one hallucination or incorrect AI claim.
	4	Feed AI a fabricated news headline and observe its verification response; use reverse prompting to make AI critique its own output; discuss business situations where AI should not be used.

Module	Practical Exercise #	Exercise Details
	5	Choose a local business idea (e.g. a cloud kitchen in Jaipur); use Perplexity AI to research market size, competitors and trends; generate a structured one-page market research report.
Module-2: <i>AI for Business Operations & Analysis</i>	6	Upload a provided sales dataset (CSV) to Julius AI; ask natural-language business questions (highest revenue, monthly trend); export generated charts and a summary.
	7	Continue with the same dataset — ask Julius AI to find anomalies; prompt a 200-word CEO business summary; compare the AI-written summary with a student-written one.
	8	Upload a sample P&L statement to Claude or ChatGPT; ask AI to explain it in plain language and identify problem areas; run a ‘sales drop 20%’ scenario and observe AI's reasoning.
	9	Choose a well-known Indian brand (Zomato, Jio or Amul); generate a full SWOT analysis using structured prompts; run Porter's Five Forces and compare AI output with the student's own analysis.
	10	Draft a business proposal for a hypothetical startup using AI; use Grammarly and ChatGPT to polish tone for an investor audience; rewrite the same content for investor, customer and employee audiences.
Module-3: <i>AI for Marketing, Branding & Consumer Intelligence</i>	11	Define a detailed target customer persona using ChatGPT; generate a 4-week social media campaign calendar; write captions adapted for Instagram, LinkedIn and Twitter.
	12	Use Canva AI to create a basic brand kit — logo concept, colour palette and typography; generate custom background visuals using Adobe Firefly or DALL-E; design an A4 company profile page.

Module	Practical Exercise #	Exercise Details
	13	Create a 5-slide Instagram carousel post for a fictional brand launch using Canva AI; generate a LinkedIn article introduction with a strong hook; export visuals in post-ready dimensions.
	14	Write a 60-second brand advertisement script using ChatGPT; convert it to a video using Lumen5 or Veed.io; add an AI-generated voiceover and subtitles, exported as an Instagram Reel.
	15	Collect 20 Google reviews for a local business and paste into ChatGPT; analyse sentiment for top complaints and praises; generate an improvement recommendation report.
Module-4: <i>AI for Pitching, Entrepreneurship & Automation</i>	16	Input a 3-line business idea into Gamma.AI and generate a 10-slide pitch deck; refine it with custom branding and imagery; present the deck to the class in 3 minutes.
	17	Pitch a business idea to ChatGPT and respond to its hard validation questions; identify the top 3 risks and opportunities; generate a one-page Lean Canvas using structured prompting.
	18	Set up a simple Zapier workflow (Google Form submission triggers an automated Gmail reply); use ChatGPT to write 3 automated email templates; identify 5 repetitive tasks AI could automate.
	19	Build a chatbot for a fictional e-commerce store using Tidio or Dialogflow; train it with 10 FAQ pairs; test it with a classmate and improve 3 responses.
	20	Research which BBA career roles are most at risk from AI automation using Perplexity AI, and which new roles AI is creating; write a 150-word personal 'My AI Strategy' statement.

Module	Practical Exercise #	Exercise Details
Module-5: <i>Capstone Project — AI-Powered Business Venture</i>	21	Capstone Kickoff: define the business idea, target market and problem being solved in groups; validate the idea using AI as a devil's advocate; submit a one-page Project Scope document.
	22	Build Session — Research, Analysis & Content: complete a market research report using Perplexity AI; build a data/financial model using Julius AI or Excel; design brand content using Canva AI.
	23	Build Session — Pitch Deck, Video & Peer Review: finalize a 10-slide investor pitch deck using Gamma.AI; record a 60-second promo video; conduct a structured peer review of another group's deck.
	24	Grand Finale — Public Presentations: each group presents a 5– 7 minute investor pitch to a faculty panel with Q&A on business logic and AI tool usage; each student also publishes a LinkedIn post showcasing their capstone project and role in it; panel votes for Best AI Business Project.

Course Outcome

CO-1	Student compares leading AI tools, applies advanced prompt engineering (chain and role-based prompting), and conducts credible AI-assisted business research.
CO-2	Student analyses business data using Julius AI, explains financial statements, applies SWOT and Porter's Five Forces frameworks, and produces professional AI-assisted business writing.
CO-3	Student builds AI-generated marketing campaigns, brand kits, social media content, marketing videos, and consumer sentiment reports.

CO-4	Student validates a startup idea, builds investor pitch decks, automates workflows with Zapier, builds a no-code business chatbot, and evaluates AI's impact on business careers.
CO-5	Student independently builds and presents a complete AI-powered business venture — market research, financial model, brand content, pitch deck and promo video — to a faculty panel, and showcases the project professionally on LinkedIn.

CO-PO-PSO Mapping Table (H: High, M: Medium, L: Low)
